

# How to use WHS

1. If you are already registered in a course using WHS, then you should have a valid account for your specific course and section. Log in to WHS using the following procedure:
  - Go to the mathclass site: [www.mathclass.org](http://www.mathclass.org).
  - log in using the following user name and password:
    - User name:** The eight digits of the student ID. Note that this is no longer the same as your social security number. Do not add any prefix or suffix.
    - Password:** The letters “u\$” followed by the **last** six digits of your student ID.
  - If the above fails, make sure you have followed the instructions carefully. If you cannot get it to work, seek help in mathskeller (CB063) or consult your teacher or TA.
2. **Do not** try to create a new account. The system may let you create a browser account, but you will not get into the right class.
3. Your account may not be set up if you registered late. Typically, your account will be set up within a day after registration. If you still have problems after a day, contact your teacher or TA.
4. The system will prompt you to give your active email and invite you to change password. Do so and save the details somewhere. If you lose your password then you can get the reset password only at the email that you have set up!

The most common mistake is to forget which email account you declared!
5. Once you get into the system, you should check the menu entitled “Tutorials” for information on how to get the system to cooperate with your browser and answers to other questions. Be sure to visit the “Maintain your account menu” also on a regular basis. Also, when you get in your class, pay attention to the latest messages.
